Sets

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

- A **set** is a collection of elements
 - $A = \{1, 5, -2, 7\} = \{1, 1, 5, -2, -2, 7, 7, 7\}$
 - $B = \{\text{monkey, money, key}\}$
- **Membership**
 - $1 \in A$ and $100 \notin A$
 - $\text{money} \in B$ and $\text{pool} \notin B$
- **Subsets**
 - $A \subset C$ if every element of A is in C
Consider $A = \{1, 5, -2, 7\}$ and $C = \{1, 5, 8, -2, 7, 12\}$. We say $A \subset C$ but $C \not\subset A$.
- **Cardinality** of a set is the number of elements in that set
 - $|A| = 4$, $|B| = 3$, $|C| = 6$
- **Empty set**, \emptyset , has no member. $|\emptyset| = 0$.

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

- **Universal set U :** the set that contains all elements under consideration.
- **Set compliment:** The complement of A is the set of all elements in the universal set U , but not in A , and is denoted by A^c

$$A^c = \{x | x \in U \text{ and } x \notin A\}$$

Operations on Sets

- **Union** of A and B is $A \cup B$
 - $A \cup B = \{x | x \in A \text{ OR } x \in B\}$
- **Intersection** of A and B is $A \cap B$
 - $A \cap B = \{x | x \in A \text{ AND } x \in B\}$
- **Set difference** of A and B is $A \setminus B$ or $A - B$
 - $A \setminus B = \{x | x \in A \text{ AND } x \notin B\} = A \cap B^c = A - B$

- You search and learn **symmetric difference** between two sets

This file is meant for personal use by $A \Delta B$ saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

- **Inclusion-exclusion Theorem**

$$|A \cup B| = |A| + |B| - |A \cap B|$$

- Example: consider $A = \{1, 5, -7, 3\}$ and $B = \{1, -5, -7, 4\}$
 - Find $A \cup B$ and $A \cap B$
 - Find $|A|$, $|B|$, $|A \cup B|$ and $|A \cap B|$
 - Verify the Inclusion-exclusion Theorem.

Scalars

- Scalars are just numbers, like $1, -\frac{1}{3}, \frac{\pi}{3}$
- Frequent sets of scalars
 - Natural Numbers $\mathbb{N} = \{1, 2, 3, \dots\}$ or the counting numbers
 - Integers $\mathbb{Z} = \{0, \pm 1, \pm 2, \dots\}$ or

$$\{\dots, -3, -2, -1, 0, 1, 2, 3, \dots\}$$

- Rational Numbers \mathbb{Q} numbers of the form $\frac{m}{n}$ where $n \neq 0$ and $m, n \in \mathbb{Z}$
 - number can be written as a Ratio of two integers
 - fractional, decimal $\frac{3}{2} = 1.5$ or $7 = \frac{7}{1}$
 - what about $\frac{1}{3} = 0.333333\dots$?
- The decimal representation of a rational number always either terminates after a finite number of digits or begins to repeat the same digits over and over.
- any repeating or terminating decimal represents a rational number.

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

- Irrational Numbers \mathbb{I} :
 - numbers cannot be written as a ratio of two integers
 - $\pi = 3.1415926535897932384626433832795\dots$
 - $e = 2.7182818284590452353602874713527\dots$
 - Surds: $\sqrt{2}$
 - numbers non-terminating decimal with no pattern
- Real Numbers \mathbb{R} : all numbers mentioned above all together

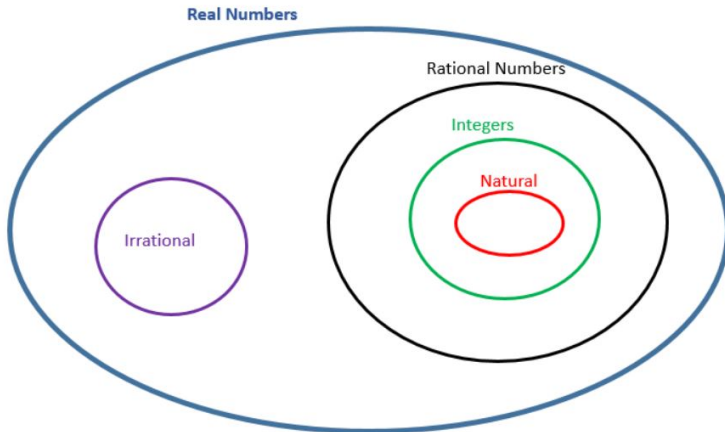

$$\mathbb{N} \subset \mathbb{Z} \subset \mathbb{Q} \subset \mathbb{R}$$

$$\mathbb{I} \subset \mathbb{R}$$

- $\mathbb{Q}^c = \mathbb{I}$ and $\mathbb{I}^c = \mathbb{Q}$
- $\mathbb{Q} \cup \mathbb{I} = \mathbb{R}$

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Scalars

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Representing \mathbb{R}

- Real numbers can be shown on a line (two-sided arrow)
 - reference point as origin
 - Positive and negative direction
 - coordinate line or real line
 - The real numbers are ordered
- Concept of ∞ and $-\infty$
- If you have a real variable x , it could be everywhere on this two-sided arrow

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Inequalities

- $x = y$, x is equal to y
- $x < y$, x is less than y
- $y < x$, x is greater than y
- $x \leq y$, x is less than or equal to y
- $x \geq y$, y is greater than or equal to x
- $x \ll y$, x is much, much less than y
- important considerations
 - If $x = y$, then for any real number a , $ax = ay$
 - if $x \leq y$
 - if a is a positive number, $ax \leq ay$
 - if a is a negative number, $ax \geq ay$

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

- **Closed** intervals $[a, b] = \{x | a \leq x \leq b\}$
- **Open** intervals $(a, b) = \{x | a < x < b\}$
- **Half-open** intervals ,
 - $(a, b] = \{x | a < x \leq b\}$
 - $[a, b) = \{x | a \leq x < b\}$
- **Rays**
 - $[a, \infty) = \{x | x \geq a\}$
 - $(-\infty, a) = \{x | x < a\}$
 - similarly, (a, ∞) , $(-\infty, a]$

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Summation and Product notations

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Sigma Notation for Sums

- $\sum_{i=2}^6 i = 2 + 3 + 4 + 5 + 6$
- $\sum_{i=2}^6 i^2 = (2)^2 + (3)^2 + (4)^2 + (5)^2 + (6)^2 = 4 + 9 + 16 + 25 + 36$
- $\sum_{k=2}^6 (2k + 1) =$
 $(2(2) + 1) + (2(3) + 1) + (2(4) + 1) + (2(5) + 1) + (2(6) + 1)$
- $\sum_{j=0}^3 \binom{j}{k} = \binom{0}{k} + \binom{1}{k} + \binom{2}{k} + \binom{3}{k}$
- $\sum_{j=0}^3 5 = 5 + 5 + 5 + 5 = (3 - 0 + 1)5$
- $\sum_{j=m}^n a = (n - m + 1)a$

- Check that $\sum_{j=0}^3 (j^2 + 2j) = \left(\sum_{j=0}^3 j^2 \right) + \left(2 \sum_{j=0}^3 j \right)$

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Sigma Notation for Sums

- $\sum_{i=1}^n x_i = x_1 + x_2 + \dots + x_n$
- Suppose set $X = \{x_1, x_2, \dots, x_n\}$ is given.
 - The average of the values of X

$$\bar{x} = \frac{\text{add all values}}{\text{divide by } |X|} = \frac{x_1 + x_2 + \dots + x_n}{n} = \frac{\sum_{i=1}^n x_i}{n}$$

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Notation for products

- $\prod_{i=1}^n x_i = x_1 x_2 \dots x_n$
- $\prod_{i=2}^5 x_i = x_2 x_3 x_4 x_5$
- For a nonnegative integer n , the factorial is defined as

$$n! = n(n-1)(n-2) \dots (3)(2)(1)$$

$$5! = 5 \times 4 \times 3 \times 2 \times 1 = 120, \text{ also } 1! = 0! = 1$$

- We can represent factorial as

$$n! = \prod_{i=1}^n i$$

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Coordinate Systems and Distance

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Coordinates of \mathbb{R}^2 (Cartesian Plane)

- Points on a line can be identified with real numbers
- Points on a plane can be identified by with ordered pairs of numbers

$$(x, y)$$

- axis and quadrants

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Cartesian plane

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Distance

- Pythagoras' Theorem

- $z^2 = x^2 + y^2$

- Distance between two points

$$\text{dist}(A, C) = \sqrt{(c - a)^2 + (d - b)^2}$$

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Distance applications: k Nearest Neighbours

- $\text{dist}(A, B)$, $\text{dist}(A, O)$, $\text{dist}(A, D)$

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Distance applications: k Nearest Neighbours

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Distance applications: k Nearest Neighbours

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Distance applications: k Nearest Neighbours

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Distance applications: Clustering

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Distance applications: Clustering

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Functions

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Functions

- Ordered pairs (x, y)
- Independent variable (shown generally by x) and dependent variable (shown generally by y)
- A function $f : A \rightarrow B$ transforms each element $x \in A$ into $f(x) \in B$
- a particular ordered pair $(x, f(x))$
- visual detection of functions: vertical line test

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Vertical line tests

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

- Let X and Y be sets.
- A function f from X to Y assigns (images) each element $x \in X$ to exactly one element in $y \in Y$.

$$f : X \rightarrow Y$$

$$y = f(x)$$

- Functions are also called mappings or transformations.
- X is called domain
- Y is called co-domain
- The range of f is the set of all images of elements in X

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Finding domain of functions

- Be carefull
 - Never devide by zero! There should not be zero in the denominator.
 - No negative number under the square root sign.
- Generally finding the domain of a function is easier than finding the range of that function.
- Injective or one-to-one
For all $a, b \in X$, if $f(a) = f(b)$ then $a = b$

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Vertical and horizontal line tests

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Some Functions and their graphs

- A linear function: $f : \mathbb{R} \rightarrow \mathbb{R}$

$$f(x) = mx + b$$

- Absolute value function: $f : \mathbb{R} \rightarrow \mathbb{R}$

$$f(x) = |x|$$

- Quadratic functions $f : \mathbb{R} \rightarrow \mathbb{R}$

$$f(x) = ax^2 + bx + c$$

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Types of functions: Increasing and Decreasing Functions

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Frequent Classes of functions: Linear Models

- $y = f(x) = mx + b$
 - m slope
 - b y -intercept
- different types of lines based on different values of m and b

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Frequent Classes of functions: Polynomials

- $y = f(x) = P(x) = a_n x^n + a_{n-1} x^{n-1} + \dots + a_2 x^2 + a_1 x + a_0$
 - n nonnegative integer
 - $a_n, a_{n-1}, \dots, a_2, a_1, a_0$ coefficients
 - if $a_n \neq 0$, the degree of polynomial is n
 - domain is $(-\infty, +\infty) = \mathbb{R}$
- Example: $P(x) = 2x^5 - x^3 + \frac{3}{7}x^2 + \sqrt{3}$
- Linear function: polynomial of degree 1, $y = ax + b$
- Quadratic function: polynomial of degree 2. $a \neq 0$

$$P(x) = ax^2 + bx + c, \quad a \neq 0$$

- Cubic function $P(x) = ax^3 + bx^2 + cx + d$ given that $a \neq 0$

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Frequent Classes of functions: Power and Rational Functions

- Power functions

- $f(x) = x^a$, where a is a constant
 - $f(x) = x^n$, n is a positive integer
 - $f(x) = x^{\frac{1}{n}} = \sqrt[n]{x}$, n is a positive integer, root function
 - $f(x) = x^{-1} = \frac{1}{x}$ reciprocal function

- Rational functions

- $f(x) = \frac{P(x)}{Q(x)}$ where P and Q are polynomials

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Frequent Classes of functions: Trigonometric Functions

- $y = \sin(x)$, $-1 \leq \sin(x) \leq 1$, $\sin(n\pi) = 0$
- $y = \cos(x)$, $-1 \leq \cos(x) \leq 1$
- $y = \tan(x) = \frac{\sin(x)}{\cos(x)}$
- $y = \cot(x) = \frac{\cos(x)}{\sin(x)}$
- $y = \sec(x) = \frac{1}{\cos(x)}$
- $y = \csc(x) = \frac{1}{\sin(x)}$

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Frequent Classes of functions: Exponential

- $y = f(x) = b^x$ where the base b is a positive constant
 - $b > 1$ growth function
 - $b < 1$ decay function
- Index laws
 - $(a^n)(a^m) = a^{n+m}$
 - $\frac{a^n}{a^m} = a^{n-m}$
 - $(ab)^n = (a^n)(b^n)$
 - $\left(\frac{a}{b}\right)^n = \frac{a^n}{b^n}$
 - $(a^n)^m = a^{mn}$
 - for $a \neq 0$, $a^0 = 1$ and $a^1 = a$
 - $a^{-n} = \frac{1}{a^n}$
- $y = e^x$ where $e \approx 2.718$ is called natural exponential function

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Growth and Decay

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Frequent Classes of functions: Logarithmic

- $y = f(x) = \log_b(x)$ where the base b is a positive constant
- $y = \log_b(x)$ same as $x = b^y$
- Logarithmic properties
 - $\log_b(xy) = \log_b(x) + \log_b(y)$
 - $\log_b(\frac{x}{y}) = \log_b(x) - \log_b(y)$
 - $\log_b(x^r) = r \log_b(x)$
- if $b = e$, $\log_e(x) = \ln(x)$
 - $\ln(x) = y \iff e^y = x$
 - $\ln(e^x) = x$ for all $x \in \mathbb{R}$
 - $e^{\ln(x)} = x$ for all $x > 0$
 - $\ln(e) = 1$
- $\log(x_1 x_2 x_3) = \log(x_1) + \log(x_2) + \log(x_3)$
- $\log\left(\prod_{i=1}^n x_i\right) = \sum_{i=1}^n \log(x_i)$ and
$$\log\left(\prod_{i=1}^n f(x_i)\right) = \sum_{i=1}^n \log(f(x_i))$$

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Logarithmic function

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Composition of functions

- $(f \circ g)(x) = f(g(x))$
- Example
 - $f(x) = x^2$, and $g(x) = x - 2$, then
$$(f \circ g)(x) = f(g(x)) = f(x - 2) = (x - 2)^2$$
 - $(g \circ f)(x) = g(f(x)) = g(x^2) = x^2 - 2$
- In general $(f \circ g)(x) \neq (g \circ f)(x)$
- $(f \circ g \circ h)(x) = f(g(h(x)))$

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Derivatives

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Why do we need derivative?

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Derivative: the rate of change

- slope of $y = f(x)$ at $x = a$

$$f'(a) = \lim_{h \rightarrow 0} \frac{f(a+h) - f(a)}{h}$$

- sign and magnitude of slope
 - Slope is positive at $x = a$: increasing
 - Slope is negative at $x = a$: decreasing
 - $f'(a) \leq f'(b)$
 - Slope is zero at $x = a$: stationary point
- for $y = f(x)$, $f'(x) = y' = \frac{dy}{dx} = \frac{df}{dx}$ are the same

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Derivative Table

- $f(x) = c$, then $f'(x) = 0$
- $y = x$, then $y' = 1$
- $y = x^n$, then, $y' = nx^{n-1}$
- $(cf(x))' = cf'(x)$
- $y = af_1(x) + bf_2(x)$, then $y' = af_1'(x) + bf_2'(x)$
- $y = f_1(x)f_2(x)$, then $y' = f_1'(x)f_2(x) + f_1(x)f_2'(x)$
- $y = \frac{f(x)}{g(x)}$, then

$$y' = \frac{f'(x)g(x) - f(x)g'(x)}{[g(x)]^2}$$

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Derivative of Trigonometric functions

- $y = \sin(x)$, then $y' = \cos(x)$
- $y = \cos(x)$, then $y' = -\sin(x)$
- find the derivative of $y = \tan(x)$. (ans. $\sec^2(x)$)
- find the derivative of $y = \cot(x)$. (ans: $-\csc^2(x)$)
- find the derivative of $y = \sec(x)$. (ans: $\sec(x) \tan(x)$)
- find the derivative of $y = \csc(x)$. (ans: $-\csc(x) \cot(x)$)

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

More derivatives

- $\frac{d}{dx}(\ln(x)) = \frac{1}{x}$
- $\frac{d}{dx}[\ln(g(x))] = \frac{g'(x)}{g(x)}$
- $\frac{d}{dx}(\sin(kx)) = k \cos(kx)$
- $\frac{d}{dx}(\cos(kx)) = -k \sin(kx)$
- $\frac{d}{dx}(e^{kx}) = ke^{kx}$

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

The Chain Rule

- When $y = f \circ g(x)$ or $y = f(g(x))$
- $y' = g'(x)f'(g(x))$
- Another interpretation:
 - if $y = f(u)$, we can talk about the rate of change of y when independent variable u is changing, which is $\frac{dy}{du}$.
 - If $u = g(x)$, then we can talk about the rate of change of u , when independent variable x is changing, which is $\frac{du}{dx}$.
 - $y = f(u)$ and $u = g(x)$, then $y = f(g(x))$, and y is a function of x . The rate of change of y with respect to x is

$$\frac{dy}{dx} = \frac{dy}{du} \frac{du}{dx}$$

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Linear Approximation

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Linear Approximation

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Finding maxima and minima

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Finding maxima and minima

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Finding maxima and minima

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Finding Maxima and minima

- The points on a curve $y = f(x)$ at which the slope (gradient) is 0 are called **stationary points** (or **critical points**).
- For $y = f(x)$ if $f'(c) = 0$, then c is a stationary point
- A stationary point could be
 - a local maximum,
 - a local minimum, or
 - a horizontal point of inflection

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Finding Maxima and minima of $y = f(x)$

- solve $f'(c) = 0$ and find c values
 - The stationary point $x = c$ is a local maximum point if

$$\begin{cases} x < c & f'(x) > 0 \\ x > c & f'(x) < 0 \end{cases}$$

- The stationary point $x = c$ is a local minimum point if

$$\begin{cases} x < c & f'(x) < 0 \\ x > c & f'(x) > 0 \end{cases}$$

- a horizontal point of inflection otherwise.

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Maxima and minima of $f(x)$ using second derivative

- Stationary (critical) points: $f'(c) = 0$
 - if $f''(c) > 0$, $x = c$ is a local minima
 - if $f''(c) < 0$, $x = c$ is a local maxima
 - if $f''(c) = 0$, $x = c$ no conclusion
- $f''(x) > 0$ at a point, the curve is concave up (convex) at that point
- $f''(x) < 0$ at a point, the curve is concave down (concave) at that point

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Integrals

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Integrals

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

Area in distributions

$$P(a \leq X \leq b)$$

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

- Indefinite Integral: If $F'(x) = f(x)$, then

$$\int f(x)dx = F(x) + c.$$

$F(x)$ is called an antiderivative of f .

- Definite Integral: $\int_a^b f(x)dx = F(b) - F(a)$

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Integrals

- $\int f(x)dx = F(x)$ means $F'(x) = f(x)$
- $\int cf(x)dx = c \int f(x)dx$
- $\int [f(x) + g(x)]dx = \int f(x)dx + \int g(x)dx$
- $\int kdx = kx + C$
- $\int x^n dx = \frac{x^{n+1}}{n+1} + C, \quad (n \neq -1)$
- $\int \sin(x)dx = -\cos(x) + C$
- $\int \cos(x)dx = \sin(x) + C$

System of Simultaneous Equations

This file is meant for personal use by saurabh.dharma01@gmail.com only.
Sharing or publishing the contents in part or full is liable for legal action.

System of simultaneous equations

$$\begin{cases} x - 2y = 6, & \text{line 1} \\ x + y = 3, & \text{line 2} \end{cases}$$

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Sharing or publishing the contents in part or full is liable for legal action.

System of simultaneous equations

- Substitution

- ① Make one variable the subject of one of the equations
- ② Substitute for this variable in the other equation
- ③ Solve this equation to find the solution for one variable
- ④ Substitute the answer found in 3 into the equation obtained in 1 to find the solution for the remaining variable

- solve

$$\begin{cases} x - 2y = 6, & \text{line 1} \\ x + y = 3, & \text{line 2} \end{cases}$$

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Linear System of two equations

$$\begin{cases} a_1x_1 + b_1x_2 = c_1 \rightarrow (l_1) \\ a_2x_1 + b_2x_2 = c_2 \rightarrow (l_2) \end{cases}$$

System of three simultaneous equations

- Solve by substitution

$$\begin{cases} x + y + z = 6, & \text{plane 1} \\ x + 2y = 5, & \text{plane 2} \\ 2x + z = 5, & \text{plane 3} \end{cases}$$

This file is meant for personal use by saurabh.dharma01@gmail.com only.

Which system is easier to solve?

- System 1

$$\begin{cases} x + y + z = 6, & \text{plane 1} \\ x + 2y + 0z = 5, & \text{plane 2} \\ 2x + 0y + z = 5, & \text{plane 3} \end{cases}$$

- System 2

$$\begin{cases} x + 0y + 2z = 7, & \text{plane 1} \\ 0x + y - z = -1, & \text{plane 2} \\ 0x + 0y + z = 3, & \text{plane 3} \end{cases}$$

- System 3

$$\begin{cases} x + 0y + 0z = 1, & \text{plane 1} \\ 0x + y + 0z = 2, & \text{plane 2} \\ 0x + 0y + z = 3, & \text{plane 3} \end{cases}$$

Useful but harmless operations

$$\begin{cases} x - 2y = 6, \\ x + y = 3, \end{cases}$$

- Interchange two equations
- Multiply each element in an equation by a non-zero number
- Multiply an equation by a non-zero number and add the result to another equation.
